News Express

Most of us have some kind of a love affair with our bikes. Nothing is too good or too expensive for our ride. We care about it, we make sure that the service is done regularly using top of the line parts or fluids. It does not matter if you are man or woman, the passion is the same.

Once in a while, an external source appears to do better than your own motorcycle brand, and it is the case with K&P Engineering in the oil filter business.

The next few pages of this News Express bulletin will introduce you to a fantastic product, designed with care and savoir faire. This company is not just your next door outfitter, their expertise and knowledge has earned them world wide recognition. Recently they were awarded an additional approval for certified aircraft use in Europe by the European equivalent of the FAA, which is the EASA.

All of K&P Engineering's filters come off the same assembly processes, so you will be getting the same materials and quality that go into the FAA and EASA approved filters and these filters are 100% made in the US which is something I appreciate even more. The result is the finest motorcycle oil filter you can buy.

And for those who would like to have a different look, the K&P oil filters offer a range of finishes and Bling treatments, including Chrome, Titanium Color, Black Anodized, Polished, Chrome Diamond Cut, Polished Diamond Cut and Black Diamond Cut.

BMW riders are notorious for being high mileage and even inter continental riders. The cleanable/reusable aspect of the filter should be of great interest in addition to all of the performance benefits the filter brings to the table. Therefore GS riders will even more appreciate the specs of this filter.

But like for every success story, imitations and knock offs are out there. So just be careful when you want to install a reusable oil filter from K & P Engineering.

These replicas have been tested and are worst than the paper filter they are supposed to replace. So, beware of the look alikes.

In these pages, you will find the list of the official resellers that will help you get the right part for your motorcycle. Your motorcycle was an investment. Many of us have planned to keep our bike for a long time, so take my advice and invest in a K&P Engineering oil filter. Ed.
